

Task for application of front end developer at Legistify, Noida.

Procedure: Every candidate will be judged by the quality of his/her work, neatness of the code etc. Each and every detail has a point allotted for the total tally in the end. Points will be deducted for late submission/incomplete submission. Extra points shall be given for finishing the task before the deadline.

Deadline: 7 PM, February 6th, 2016.

Pre-requisites: HTML, CSS, Javascript, Bootstrap, Angular.JS, GitHub etc.

Please note that you are free to use any of the above mentioned languages (whichever you are most comfortable with) for the task.

Task Background: Legistify is an online legal facilitation platform. Lawyers sign up on our platform by filling a form on the site giving their detailed information. This information is reflected on their profile page which can be seen by all the other users on the site. You have to make this form and profile page as per the design enclosed. Creativity is always appreciated but do not try and change the design in a major way. In case of any problems drop us a mail at careers@legistify.com

Deliverables:

1. Push all your code on a GitHub or BitBucket repo and send the link to the repo.
2. Deploy your code on some web hosting platform and send the link for the same.

Specific Details:

Following are the details for the lawyer form-

1. Form is segregated into sections, based on the information provided. The headings for each are given on the left. Each time a user finishes a tab only then he is allowed to go the next tab. Also you have to apply a check that all the compulsory fields (***MARKED**) in one tab are filled first.
2. Height of the entire section should be fixed, so a scroll bar will appear in case of more questions appearing in a tab.
3. If a user fills in wrong info, error is to be shown in red somewhere on the page (your discretion).
4. Add button replicates the same fields for ex. if add is below honors then when a person clicks on it, field for name, grantor and year are repeated again followed by add button.
5. Use any header and footer you want for now just keep the color combination same.
6. Entire thing should be **mobile responsive**.
7. The corresponding tab headings and form fields are-

Tab 1: User Details- *Name, *Email, *Username, *Password, *DOB, *Gender, *Mobile No, *Education(Law college, degree name, graduation year with ADD button below to add another degree)

Tab 2: Legal Info- *Practice Areas(a dropdown in which max 4 options can be filled, use dummy data here), *Court(with add button), *State, *Office Address

Tab 3: Basic Details- *Summary, *Experience (Job title, company name, time period with add button), Honors, Publications.

Tab 4: Bar Council Info- *State, *Bar ID, *year of enrollment, *profile pic upload.

Following are the details for the lawyer profile-

1. Lawyer profile page is the showcase page for every lawyer so this page has to look extremely good and professional.
2. There will be a small cover page and certain info would be shown on the same as per design.
3. There will be 2 tabs below it namely "about" and "review". On clicking one of these the info below the header changes and everything else remains as it is (refer design).
4. Design should be mobile responsive and neat. Please note this is not the final design but we want to see how well you can actually improvise on the basic information we had given.

For the part of code:

1. You can use any libraries as required
2. Your code should be dynamic (Addition/Deletion of fields or tabs should be quick and easy)
3. The page should be fluid and responsive (ie. It should work in all screen sizes)
4. Code should be properly indented and comments should be used at appropriate places

Result: The results for this round shall be announced within a week following the given deadline. Top performing candidates would be directly called for face to face/skype interviews with the core team members.

All the best!

Regards

Team Legistify
